

Don's, N900 Drake TR7 with the Blue LED Lamp Kit and Multicolour Frequency Display

Here are a few pictures of my personal Drake TR7. Installed with the Blue Bar LED backlighting. Also notice the multicolour frequency display. These can be purchased from Willi DF4NW in several colours or colour combinations. Willi also can supply smoked filters. I use the lightest filters that Willi provided and have them over the digital frequency display and also over the meter and PTO display areas. I've included a powered off view of the TR7 which shows how "stealth" the TR7 becomes when the smoked filters are used. The frequency and meter display areas turn dark on power off and simply disappear from view. A real 21st Century Drake TR7!
